EXPERIMENT 2

Setting Up a Zoho Creator Account

Exploring the platform architecture and interface

Submitted by	PRANAV SRINEVAS V	**Register No.**	241401068
Application	Gym_Membership_Management_System (Zoho Creator)	**Department**	B.Tech CSBS

1. Introduction

Zoho Creator is a low-code platform for building, deploying and managing custom business applications. This record describes the setting up of a Zoho Creator trial account, the structure of the Creator console, and how the Gym Membership Management System fits into it. The console is organised into three groups, DEVELOP, DEPLOY and MANAGE, shown in the left-hand navigation panel.

2. Objective

- To create a Zoho Creator trial account and the application Gym_Membership_Management_System.
- To navigate the DEVELOP, DEPLOY and MANAGE sections and understand their roles.
- To identify the purpose of each module: Applications, Microservices, Environments, Mobile, Portal, Users, Organization, Governance, Metrics, Operations and Billing.
- To document the platform architecture for academic reporting.

3. Steps Followed During Account Setup

Step	Action performed
1	Visited the Zoho Creator website and registered for a free trial using the college e-mail address (data centre zoho.in).
2	Logged in to the Creator console and opened the Applications dashboard, where the application **Gym_Membership_Management_System** was created.
3	Explored Microservices to understand modular, AI-ready integration components (connections, data sources, custom APIs).
4	Reviewed Environments to understand the Development, Stage and Production workflow (the application runs in Development).
5	Checked Mobile and Portal to understand external distribution and self-service access.
6	Opened Organization, Governance, Metrics, Operations and Billing to understand organisation settings, security policies, analytics, administration and subscription.

4. Platform Architecture

Category	Modules	Purpose
DEVELOP	Applications, Microservices	Build and manage applications; create modular microservices for connections and AI features.
DEPLOY	Environments, Mobile, Portal	Manage Development/Stage/Production, distribute the mobile app, offer a self-service portal.

Category	Modules	Purpose
MANAGE	Users, Organization, Governance, Metrics, Operations, Billing	Administer users, organisation profile, security policy, usage analytics, operations and subscription.

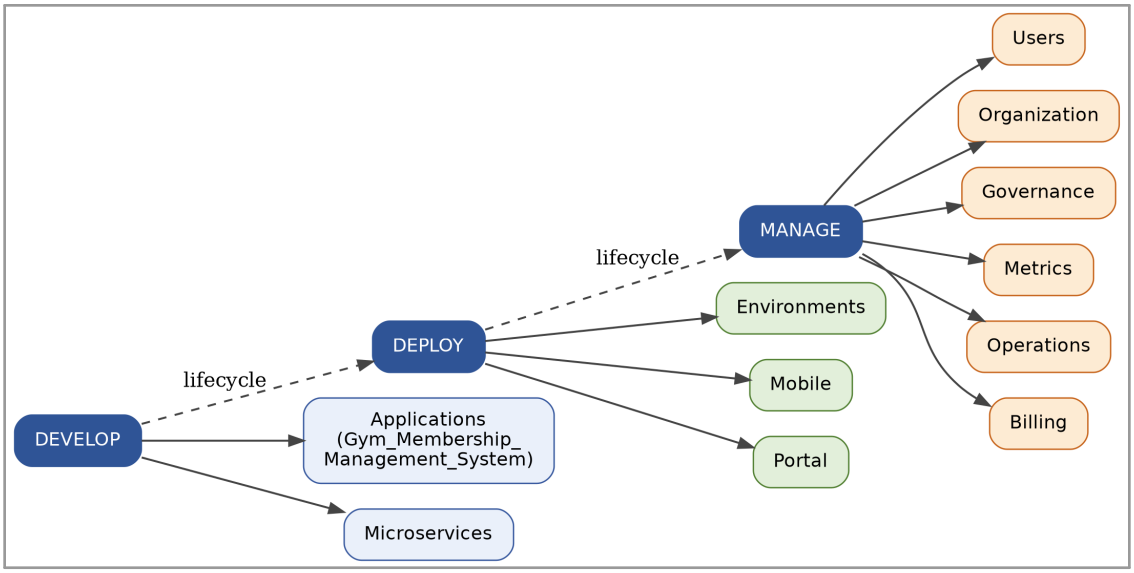

Figure A: Zoho Creator console (Develop, Deploy, Manage) and where the gym application sits.

5. The Gym Application in the Console

Under DEVELOP → Applications the application **Gym_Membership_Management_System** is listed. Opening it shows the left-hand menu of the application itself: Trainer_Registration, Membership_Plans, Member_Registration, Class_Schedule, Payment_Tracking, Attendance_Tracking and the Gym Dashboard. The tag next to the application name shows that it is open in the **Development** environment, and the top bar shows the remaining days of the trial.

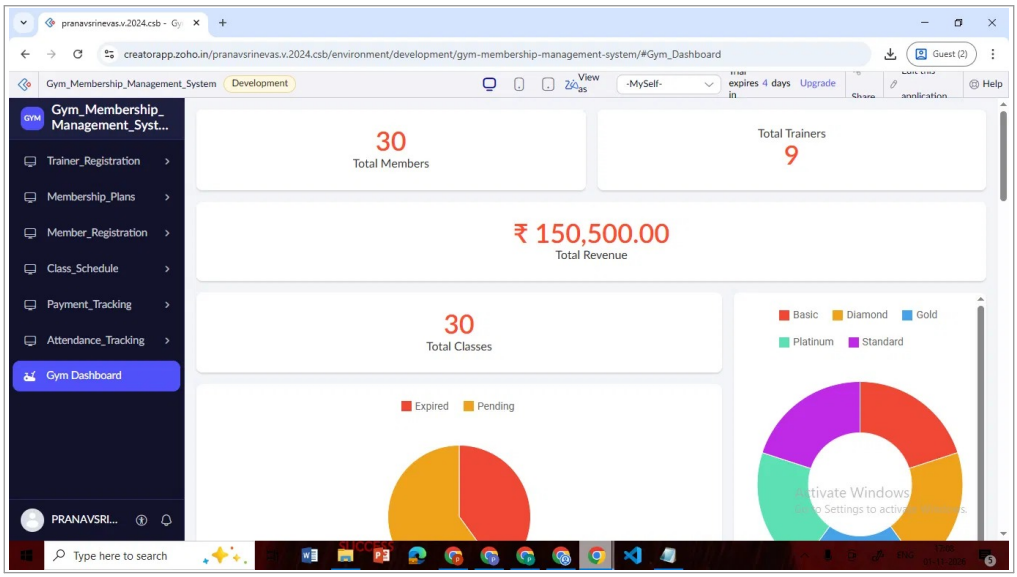

Figure 1: The gym application opened from the console; the Development tag and trial notice are visible in the top bar.

Figure 2: Application header showing the application name, the Development environment and the URL.

6. Console Module Walkthrough

The module screens below are to be captured from the account and inserted. The description under each heading is what the module is used for in the gym project.

Applications

Lists every application; the gym application is created and opened from here.

[Screenshot to be inserted]
Insert the console screenshot for: Applications

Microservices

Connections, data sources, AI models and custom APIs; not used in the gym project, but the place where a Zoho Calendar connection would be created (Experiment 7).

[Screenshot to be inserted]
Insert the console screenshot for: Microservices

Environments

Development, Stage and Production copies of an application; the gym application is in Development (Experiment 11).

[Screenshot to be inserted]
Insert the console screenshot for: Environments

Mobile and Portal

Mobile distribution and external portals; not configured for the gym project.

[Screenshot to be inserted]
Insert the console screenshot for: Mobile and Portal

Users

Where the Administrator and Trainer users are managed (Experiment 8).

[Screenshot to be inserted]
Insert the console screenshot for: Users

Organization and Governance

Organisation profile, branding and security policies such as sign-in settings (Experiment 12).

[Screenshot to be inserted]
Insert the console screenshot for: Organization and Governance

Metrics, Operations and Billing

Usage analytics, administrative controls and subscription; the trial edition is shown here.

Insert the console screenshot for: Metrics, Operations and Billing

7. Result

A Zoho Creator trial account was set up, the Gym_Membership_Management_System application was created, and the DEVELOP, DEPLOY and MANAGE structure of the console was studied. The gym application was seen to run in the Development environment of the trial edition.
